# Built-In Seed Applicator

Our easy-to-use, built-in seed applicator is perfect for applying [LawnPro Smart Lawn Seed](#) and will allow greater accuracy and even distribution across a wider area. Simply tear back the side strip to reveal our built-in seed applicator.

## Smart Lawn Seed

### Benefits and Features

- Ideal for sunny or shady areas
- Great for fixing patches or sowing a completely new lawn
- A blend of durable seed varieties which will give you a lush green lawn
- Contains the perfect blend of gentle fertilisers and soil improvers to give your new grass a great start.
- It's the only seed you need!

### Germination Strike

Smart Lawn Seed vs Other Leading Brand  
10 days

# UNIQUE **AQUA GEL** TECHNOLOGY

- 1** Aqua Gel absorbs up to 400 times its weight in water.
- 2** Water is gradually released to the seeds when needed.
- 3** Reduces seed losses due to erratic watering.
- 4** Improves germination success & seedling establishment.
- 5** Keeps working for the whole season!

THE **AQUA GEL** TECHNOLOGY KEEPS WORKING FOR THE **WHOLE SEASON**

## What's in Smart Seed

# Application

## Directions

### Preparation

1. **New lawn:** Firstly prepare the soil by clearing away any debris. Treat the area with [Weed Weapon Extra Strength](#) Weed Killer and dig out any perennial weeds. Once the soil is clear of weeds, prepare a seedbed: On a dry day, dig over the soil to a depth of 20-25 cm. Break down any lumps and tread the soil to firm it again. Level out any bumps or hollows using a rake, aiming to create a flat, even surface. The day before sowing, water thoroughly if the soil is dry and leave to soak in overnight. TIP – The top of the soil should be dry with moist soil just below the surface on the day of sowing.  
**Existing lawn:** Remove any weeds either by hand or by using [LawnPro Turfclean](#). Once weeds are dead, mow the lawn closely before raking or scarifying to remove any moss and weed remains. If the ground appears hard or compacted, aerate using a garden fork and rake over to make sure the ground is level. Finally, spread soil to fill any shallow holes and level out the surface.

### Sowing

2. TIP – Shake the box of seed thoroughly to mix up the seeds. Tear back the strip to expose the applicator holes and to sprinkle the seeds. Apply the seed at a rate of 40 g/m<sup>2</sup> (30 g/m<sup>2</sup> for lawn repairs). As a guide, one large handful is approximately 40 g. Sprinkling the seed in 2 passes at right angles to each other will help spread the seed more uniformly. Lightly rake to gently incorporate the seed into the surface.

### After Sowing

3. **Rolling:** The ground should be rolled or lightly firmed by walking over it and pressing the seed into the soil.

**Watering:** Water the lawn thoroughly using a fine-rosed watering can or a lawn sprinkler which produces a fine spray, taking care not to wash the seeds away. TIP – If sowing a new lawn in very hot conditions the lawn should be watered late in the day once the sun has gone down. It is better to water thoroughly once rather than several times lightly.

**Mowing:** Grass can be cut for the first time when it is 5-8 cm high. A light trim will be sufficient initially. Gradually lower the cutting height to about 3 cm, which is ideal. Do not remove more than 1/3rd of the growth at any one time.

TIP – Alternating the direction of the mowing encourages the lawn to thicken.

**Feeding:** After 10-12 weeks we recommend feeding your new lawn with [LawnPro 7-Day-Green](#). Simply apply after mowing for visible greening in just 3 days.

# For Best Results

## When to sow

- Lawn seed may be sown from September to June. However, for best results, sow in spring from September to October, and in early autumn from mid-March to mid-April.
- These recommendations should be adjusted to the warmer end of these periods for more southerly areas.
- Store in a cool dry place, out of direct sunlight and use within season of purchase.

## Ingredients

- Content: contains a blend of creeping red fescue and perennial ryegrass seed with seed starter fertilisers, gypsum and water storage granules.

### About the grasses:

- Red fescue (*Festuca rubra*) is a fine-bladed grass with a deep green colour. It does not require much fertiliser and is tolerant of drought.
- Perennial ryegrass (*Lolium perenne*) is a fine-textured, rich green grass. It has a high tolerance for cold temperatures.

## Available As

- 1 kg and 1.6 kg packs
- 4 kg spreader bag

## Caution

- May cause skin irritation and serious eye damage.
- Wear gloves and eye protection.
- Avoid contact with skin and eyes.
- Keep out of reach of children, store in a cool dry place, out of direct sunlight and use within season of purchase.

## Regulations

HSNO Approval Code: HSR002571
