Sorted Moss & Mould

What is it?

- **Fast, targeted formulation**
- **Easy to use hose end application**
- **Simply spray on and leave**
- **Removes surface damaging Moss, Mould, Mildew, Algae, Lichen**
- **Protects surfaces all season long**

Formulation: Benzalkonium chloride (25%) plus surfactant and chelate agents. Formulated for direct (no pre-dilution) use; click onto hose and apply.

What's the difference?

[SORTED Moss and Mould](#) contains the active ingredient

benzalkonium chloride which is effective in killing the cells and spores of simple organisms that cause discolouration of outdoor surfaces. These organisms include moss, liverwort, lichen, fungi/mould, algae and bacteria. Moss and Mould Sorted also contains ingredients which enhance the effect of benzalkonium chloride and make the formulation more effective than other benzalkonium chloride products.

Surfactant and chelate agents increase activity of benzalkonium chloride and help speed up the weathering process, meaning the surfaces will look cleaner sooner.

SORTED Moss & Mould is non-toxic and biodegradable, making it undoubtedly one of the safest outdoor cleaners on the market.

We have matched the best hose end for the type of application. This hose end will provide a wide even distribution, making it quicker to apply and rinse off, giving the best results. It has an ON, OFF and WATER only switch.

How do you use it?

Apply to dry surfaces. Do not apply if rain expected within 4-5 hrs. **Do not rinse from the treated surfaces**, leave to penetrate the surfaces. If using near plants wet the plants with water before and after use.

A second application after 1-2 months may help shift stubborn problems. Visible results may be seen within days. Depending on conditions full removal may take up to 6 months.

- [Video on How to Use the Sorted Hose End Sprayer](#)

Where to use it?

Perfect on: asphalt, artificial turf, bricks & paving, concrete, decks, driveways, fibreglass, glass houses, grouting, outdoor furniture, paintwork, paths, patios, plastic houses, pots, tiles, timber decks, vinyl cladding, weatherboards and more.

Where not to use it.

This formula might damage waterproof coatings on fabrics after repeated use. Applying once a season and thoroughly rinsing off each time is OK.

FAQ

Why shouldn't I hose the foam off?

After Sorted Moss and Mould has killed the organism it penetrates into the surface preventing organisms growing back for the entire season. If you wash the foam off, the active ingredients cannot penetrate and protect the surface. The foam will only be visible for a few minutes.

I have a tank water collection system; can I use Sorted Moss and Mould on my roof?

Yes. However, you will need to disconnect the water supply from your tank for 3-4 weeks or wait until you have at least 13 mm of rain, this is enough to make sure any surface residue has gone.

Could I use SORTED Moss and Mould as a concentrate and how do I do this?

Yes, SORTED Moss & Mould can be used as a concentrate. Mix 20 ml of SORTED Moss and Mould for every 1L of water. Apply with a brush or sprayer.
